Submitted to the EMBL Data Library, June 1933
A. Description: Complete nucleotide sequence of the Ukrainian isolate of Beat yellows vi
A. Reference number: 534205
A. Accession: 534205
A. Accession: 534205
A. Retainiary
A. Molecule type: genomic RNA
A. Residues: 1-216 AGR>
A. Residues: 1-216 AGR>

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       98
Expectational protein 2 - sugar beet yellows virus
Cispectes: sugar beet yellows virus
Cispectes: sugar beet yellows virus, SBYV
Cibate: 06-Jan-1995 #sequence_revision 06-Jan-1995 #text_change 10-Dec-1999
Ciscession: S27899
RiBrunstedt, J.; Moseley, J.; Hull, R.
Submitted to the EMBL Data Library, August 1991
A.Description: Nucleotide sequence of CDNA encoding the coat protein of beet A;Reference number: S27899
A.Stetus: 227899
A.Status: preliminary
A.Molecule type: DNA
A.Residues: 1-216 ABRU-
A.Residues: 1-216 ABRU-
A.Residues: RBBL:M59452; NID:G323237; PIDN:AAA72954.1; PID:G323239
Cisuperfamily: SBYV probable coat protein

-:- COFACTOR: Binds I magnesium ion per subunit (By similarity).
-:- ENZYME REGULATION: In contrast to yeast cyclase, S.pombe cyclase is not likely to be regulated by RAS proteins.
-:- SIMILARITY: Belongs to the adenylyl cyclase class-3 family.
-:- SIMILARITY: Contains 21 leucine-rich (LRR) repeats.
-:- SIMILARITY: Contains 1 PP2C-like domain.
-:- SIMILARITY: Contains 1 Ras-associating domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Lyase; Repeat; Leucine-rich repeat; cAMP biosynthesis; Metal-binding;

Bacteria; Spirochaetes; Spirochaetales; Spirochaetaceae; Borrelia.
NCBI_TaxID=139;
CATALYTIC ACTIVITY: ATP + acetate = ADP + acetyl phosphate.
                  -!- PATHWAY: Conversion of acetate to acetyl-CoA; first step. -!- SUBCELLULAR LOCATION: Cytoplasmic (3y similarity). -!- SIMILARITY: Belongs to the acetokinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DB 1; Length 401;

/alone_lib="QEFGHJ lettuce serriola"
/alone="Vector: pBRcDNA£iAB; The library was constructed
from 10 different sources of RNA from a single genotype.
Separate cDNAs were generated using primers that
incorporated unique 5' and 3' tags to distinguish each
source of RNA. cDNAs were then pooled, size-fractionated,
directionally cloned into a custom medium-copy vector and
transformations made with four size classes to minimize
size bias. Details of each source of RNA and library
construction can be obtained at http://cgpdb.ucdavis.edu/

/lone="Yecror: pBRcDNASfiAB; The library was constructed from 10 different sources of RNA from a single genotype. Separate cDNAs were generated using primers that incorporated unique 5' and 3' tags to distinguish each source of RNA. cDNAs were then pooled, size-fractionated, directionally cloned into a custom medium-copy vector and transformations made with four size classes to minimize size bias. Details of each source of RNA and library construction can be obtained at http://cgpdb.ucdavis.edu/
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   262

/ Lobe = "Vector: pBRCDNASfiAs; The library was constructed from 10 different sources of RNA from a single genotype. Separate cDNAs were generated using primers that incorporated unique 5' and 3' tags to distinguish each source of RNA. CDNAs were then pooled, size-fractionated, directionally cloned into a custom medium-copy vector and transformations made with four size classes to minimize size bias. Details of each source of RNA and library construction can be obtained at http://cgpdb.ucdavis.edu/TAG_INSHECDEFCHALDELECHEMICAL Induction.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              g
were collected and pooled from several plants and frozen immediately after harvesting in liquid nitrogen. The CDNA was prepared using an Xhol-poly(dT) linker-primer. An EcoRI adapter was lighted to the blunt end cDNA and the products were digested with EcoRI and Xhol enabling directional cloning into the lambda ZAP Express vector. The library was amplified using the bost strain XLI-Blue MRF'. Mass excision of the library was performed to obtain pBK-CMV phagemid clones in the host strain XLOLR. Single pass DNA sequencing was performed using the T3 promoter primer: 5' ATTAACCTCATAAAGGGA 3' This library was constlucted by Alex Alchman." I others
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         648 bp mRNA linear EST 16-NOV-2001

	/note=-vector: parcunatina; ine libiary was constructed from 10 different sources of RNA from a single genotype. Separate con%s were generated using primers that	
	incorporated unique 5' and 3' tags to distinguish each source of RNA. corks were then pooled, size-fractionadiative cloned into a custom medium-copy vector and	
	transformations made with four size classes to minimize size bias. Details of each source of RNA and library construction can be obtained at http://cgpdb.ucdavis.edu/
